

How do I get a plugin to load automatically every time I start radR?

This is not as simple as it should be, but here are the steps:

- [load the plugin manually](#) into radR (if it is not already loaded)
- check the "Load this plugin when radR starts" entry on the plugin menu; e.g. to have the bliptrails plugin load automatically every radR starts:
set_bliptrails_plugin_to_load_automatically.png

- quit radR, and choose "Yes" when asked wheter to "Save parameters and GUI configuration?"

The last step seems redundant and will be eliminated soon.
